

Traffic Calming Features

The following improvement options are being studied:

Gateway Monuments:

Gateway Monuments provide drivers with a sense of arrival and cues drivers that the conditions have changed.

Optical Speed Bars:

Optical Speed Bars visually stimulate drivers to reduce speeds of vehicles. (Use in California subject to approval)

HAWK: High-Intensity Activated Crosswalk

HAWK signaling system is a combination of a beacon flasher and traffic control signaling technique for marked pedestrian and bike trail crossings that is activated by crosswalk users. (Use in California subject to approval)

Radar Feedback:

Radar feedback signs alert drivers of their speed and can be effective in reducing the average speed along a corridor.

Roundabouts:

Roundabouts are traffic control devices that have been used in place of signals at intersections and have demonstrated improvements in the efficiency and the safety of these intersections.
